

BLADE FENCING

BLADE FENCING

Meet BLADE, our latest innovation in stylish, durable aluminium fencing. Designed with a contemporary aesthetic, BLADE features sleek 50x16mm vertical pickets welded to robust 40x40mm horizontal rails. Finished in satin black, this fencing solution offers a striking visual appeal while ensuring compliance with pool fencing regulations, seamlessly combining safety with sophisticated design.

KEY FEATURES OF BLADE FENCING

Sleek Design and Robust Construction:

- Elegant 50x16mm vertical pickets welded to 40x40mm horizontal rails.
- Satin black powder coating for a modern, resilient finish.
- Matching 975mm wide gate available, with converters for custom-width gates.

Versatile Applications:

- 1200mm high pool fencing compliant providing safety without compromising style as well as ideal for boundary fence applications.
- Available in 1000mm height for boundary fencing, offering flexible installation options.
- Complete range of posts and brackets available to suit various installation needs.

DISTINCTIVE VERTICAL PICKETS:

Batten-style fencing is increasingly popular among those seeking to balance privacy, style, and functionality. BLADE's vertical balusters capture this look perfectly, providing a sophisticated and streamlined appearance. The design allows for ample light and airflow while maintaining privacy and security.

EVOLUTION IN FENCING TECHNOLOGY

Aluminium fencing has long been a preferred choice for property owners seeking durability, aesthetic appeal, and low maintenance. BLADE elevates this standard, incorporating innovative design and enhanced functionality, making it an ideal solution for contemporary landscapes and architectural styles.

DURABILITY THAT LASTS

One of the key advantages of BLADE aluminium fencing is its exceptional durability. Aluminium is renowned for its resistance to corrosion, making it an excellent choice for outdoor applications. Unlike traditional wood fences that can warp, rot, or require regular painting and sealing, BLADE fencing retains its appearance and structural integrity with minimal maintenance. This resilience ensures that the fence will look great and perform well for many years, even in harsh weather conditions.

ENVIRONMENTAL SUSTAINABILITY

Environmental considerations are at the heart of BLADE's appeal. Aluminium is a sustainable material that can be recycled indefinitely without losing its properties. The production of aluminium fencing typically involves fewer pollutants and less energy consumption than other materials, making BLADE an eco-friendly choice for environmentally conscious consumers.

A NEW STANDARD IN FENCING

BLADE aluminium fencing represents a significant advancement in fencing solutions, combining modern aesthetics with practical benefits. Its durability, low maintenance, versatility, environmental sustainability, and robust construction make it an excellent choice for a wide range of applications. As property owners continue to seek fencing options that are both functional and stylish, BLADE is poised to become a leading choice in the market.

Our colour range

BLADE is stocked in popular Satin Black powder coat finish. Satin black continues to be the consistent colour palate for balustrade and fencing, seamlessly integrating into a variety of backgrounds.

Genuine Akzo Nobel powder is used to ensure a premium and long lasting powder coat finish.

BLADE CONFIGURATIONS

- 01 ***BLADE Core Drill***
50x50mm core drillposts featuring
BLADE panels at 1200mm or 1000mm high

- 02 ***BLADE Base Plated***
50x50mm base plated posts featuring
BLADE panels at 1200mm or 1000mm high

- 03 ***BLADE Face Mount***
50x50mm face mount posts featuring
BLADE panels at 1200mm or 1000mm high
